

## Product Information

Product Brand: Roto Patio

### Patio Inowa centre closer standard and adjustable

#### Related Products

Roto Patio  
New product

#### Scope

Patio Inowa for

- Alu: standard and adjustable
- PVC: standard and adjustable
- timber: adjustable
- timber/alu: adjustable

For Alu and PVC profiles the adjustable centre closer could be used optional. For timber and timber/alu profiles it is recommended to use the adjustable centre closers to balance the tolerances in the wood better.

#### Technical Details

For Patio Inowa there are two variants of centre closer, locking cams and anti-push back pins which are shown in the drawing s20a346-000. For both variants of the locking pin and anti-push back pin the length (X, Y, A, Z) is depending on the profile dimensions. The correct length is mentioned in the profile check.

##### **Inowa centre closer standard:**

The standard centre closer has no possibility for adjustment of the locking pin or of the anti-push back pin. The locking pin/ anti-push back pin is screwed completely into the thread of the centre closer during the assembly.

##### **Inowa centre closer adjustable:**

The adjustable centre closer offers an adjustment of +/- 2mm in combination with an adjustable locking pin/ anti-push back pin.

To enable the adjustment, the adjustable centre closer has a longer thread with 7mm. The adjustable locking pin/ anti-push back pin has also a longer thread with 12mm and an additional screw lock.

##### **Possible combination:**

The following combinations are allowed:

1. centre closer standard + locking pin/ anti-push back pin
2. centre closer adjustable + adjustable locking pin/ anti-push back pin

All other combinations are not approved by Roto.

##### **Change from Patio Inowa to optimized Patio Inowa:**

When changing to the optimized Patio Inowa items, please ensure that the correct successor is chosen. Both versions of the centre closer are available for both the previous and the new Inowa articles.
