New product

Scope

Patio Inowa for:

- Alu
- timber and timber/Alu
- PVC

Technical Details

The middlefixations of the Patio Inowa assemblies - roller unit, centre closer, control unit - are released by the screws during the assembly.

To release the middlefixations by the screws correctly, there are specification for the screws given and shown in the drawing s21a022-00.

attention:

Screws with milling or braking ribs on the countersink are not allowed to use because the ribs could damage the middlefixation during the assembly or could prevent the middlefixation from being released. For all other Patio Inowa articles, eg. strikers it is also not allowed to use screws with ribs on the countersink.
