Optimization AL SEC hinge lock set (v1)

Optimized geometry for AL Designo

Related Products

Roto AL
Modification

Technical Details

Optimization of SEC hinge lock set:

When using the AL Designo hinge side, collision between the frame and sash parts could occur in a few profile geometries.

In order to avoid complaints, the frame part of the hinge lock set has been optimized.

The added radius avoids a possible collision.

Availability / Ordering ability

The new frame part will be included in the orderable article from week 12.

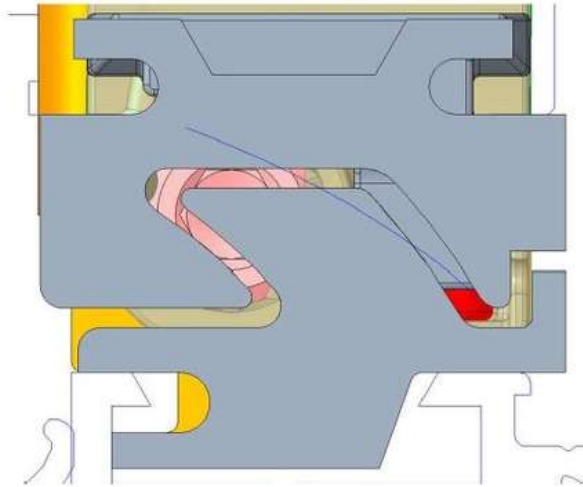

The article number remains the same.
