Application range

Control roller of the following Roto Patio Inowa 200 & 400 hardware:

- Inowa roller unit
- Inowa control unit
- Inowa SoftClose, SoftOpen and SoftStop

Technical Details

The control roller used in the Patio Inowa components has a new material due to better material availability. The new material can be recognized by its black colour, while the previous control rollers have a white-natural colour.

The Inowa components still have their high quality, function and durability and the new material has no influence on this.

The new control rollers are going smoothly into production.
