Replacement Product

Technical Details

We currently offer two different turn restrictor without braking effect for the Roto AL Designo and Roto AL Designo STS hardware systems.

Roto AL Designo: IMO_386_article number: 740814 and 740835
Roto AL Designo: IMO_575_article number: 2004506 and 2027613

In the course of standardising the product range, from **01.01.2024** we will only be using the turn restrictor 2004506 and 2027613.

This will not result in any changes in the installation situation nor in the range of applications for the Roto AL Designo hardware system.

The component dimensions remain exactly identical. The turn restrictor 740814 and 740845 can be replaced 1:1 by the variants and converted by 20004506 and 2027613. The corresponding corrections to the article numbers are in IMO_386 with the next correction run.

Only the material properties or the material compositions of the rods change:

740814/740835 --> Material: steel with RotoSil surface / corrosion protection class 5.
2004506/2027613: --> Material: stainless steel / corrosion protection class 5
