Window

Product
Roto NX

The Tilt&Turn hardware system for windows and balcony doors shaping the industry once again

Availability / Ordering ability
Available for order

Description

Area of application:

- Checking the theoretical striker and tilt striker positions in the complete mounted window
- Setting the striker and tilt striker in the frame without positioning jig
- Suitable for all NX standard locking pins (E, P, V, special P) in neutral position (gasket compression)
- Suitable for all NX striker and tilt striker

Description:

- Is positioned over a locking pin
- Is placed in the long hole in the faceplate
- Is held magnetically on the faceplate

The test jig is placed on any pin and positioned until it fits into the long hole in the faceplate (neutral position). To achieve this neutral position, the locking pin must be moved slightly over the window handle. You can then check whether the locking piece position is correct or mark where the frame part must be placed.
