Product Information

## Roto Safe - new latch adjustment parts

### Overview

#### System

Door

#### Product

Roto Safe

The modular multipoint locking system for doors

#### Availability / Ordering ability

### Description

The latch adjustment parts for Roto Safe frame parts have been completely redesigned to optimize functionality, appearance and ease of use.

### Significant changes compared to previous adjustment parts:

- **Adjustment technology:**  
Conversion from eccentric adjustment to precise toothing.
  - Adjustment travel: **+2.25 mm / -1.5 mm**
  - Adjustment in **0.75 mm increments** for precise adjustment.
- **Improved appearance:**  
Front edge in zero position flush with the most common axle dimensions for a harmonious appearance.
- **Optimized leading edge:**  
Changed geometry for improved contact pressure in the zero position.

### Availability:

The new latch adjusters are **available immediately in packs of 10:**

- For PVC/wood axis dimension 8.5-11.5 mm
- For PVC/wood axis dimension 12-15 mm
- For aluminum axis dimension 8.5-11.5 mm for leg heights <6 mm
- For Veka HET for leg height 4.5 mm and axis dimension 14 mm

### Conversion of other components:

One-piece strikers and contra espagnolettes are successively adapted (according to AS series, taking into account ranges and remaining stock). Separate information will be provided about each changeover.
