Window

Product
Roto NX

The universal hardware system for modern windows and balcony doors

Availability / Ordering ability
Flowing inflow from May 2026.

Description

Image description:

The upper image shows the previous version.
The lower image shows the current, modified version.

Technical Information:

Extra-short hardware screws are required for especially narrow window profiles.

In order to ensure efficient installation, special screwdriver mouthpieces were developed for this purpose, which require more space.

This meant that the geometry of the attached striker had to be adapted.

In order not to reduce the stability of the striker, the slot was shortened accordingly without compromising the load-bearing capacity of the component.

This change ensures that the mouthpiece of the automatic screwdriver does not collide with the locking parts.

Application range:

- For very narrow window profiles
- For larger screwdriver mouthpieces

The changeover is continuous.
