Sliding

Product

Roto Patio Fold

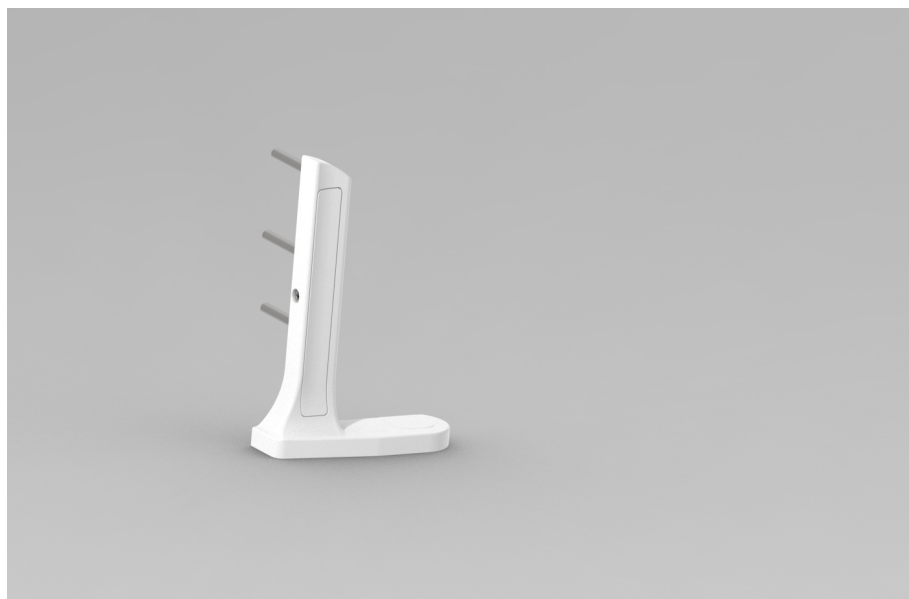

The robust hardware system for large Fold&Slide elements

Availability / Ordering ability

Available for order

Documentation

Inclusion of the cast support-bracket SG in upcoming updates to the Patio Fold installation instructions.

Description

A new support-bracket system has been developed that, for certain profiles, prevents collisions during the movement of the folding-sliding element by using a different pivot point.

This system is designed for Veka Softline 76AD and compatible with further profiles, e.g. Rehau Geneo.

The Patio Fold Profile Check determines and documents whether this new support-bracket is required.

The maximum permissible sash width per individual sash remains unchanged.

However, due to the altered geometry of the extended steel suspension, the calculation of sash widths for a specific configuration results in different sash widths compared with the short standard suspension. This is determined in the profile check.

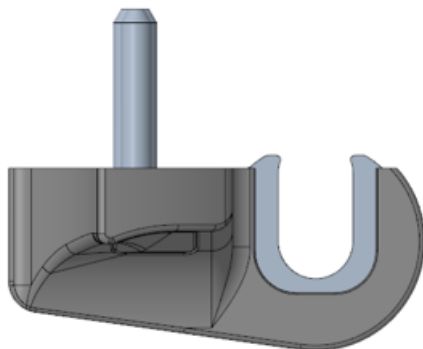

SG Support Bracket incl. Accessories

Model	Color	Pkg. Size	Material No.
with pin 40 mm	White R07.2	1	2031339

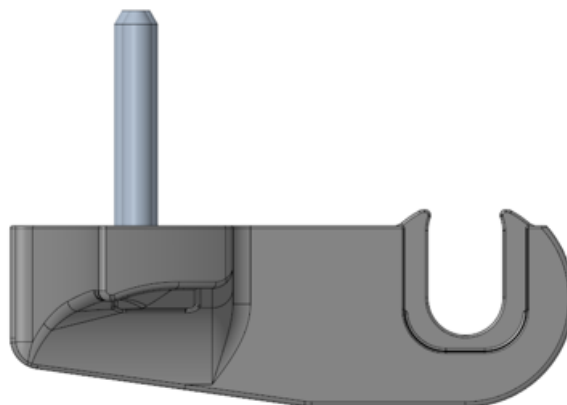

The Support Bracket SG is available in white R07.2.
