Product

Roto NX

The universal hardware system for modern windows and balcony doors

Availability / Ordering ability

Available for order; in stock starting in September 2026

Documentation

Data record 505610452

Description

Rebate run-up block for wood profiles with a flat rebate. Can be used with rebate depths of 18 to 24 mm. Rebate clearance: 12 mm.

It should be positioned as close as possible to the opening side, for example, next to the tilt&turn striker. Installation is performed by sliding it onto the rear rebate edge.

The hardware groove above the stop must be closed.

Notes:

The rebate run-up block with rollers is designed to facilitate easier closing of the sash. If the run-up block is subjected to constant stress from the closed sash, it is recommended to install an additional stop on the tilt&Turn striker (e.g., 350402).

Sash weight up to 80kg

For heavier sashes, it is recommended to use the sash lifter for corner drive 794577 / 794578 with the appropriate frame part; see document: [PI 16](#)

[1425 / RPI_26_0114](#)
